

Fasting Instructions

Shortly after you eat, the chemicals in your blood undergo changes. These changes can also occur if you do not eat for long periods, so it is important to fast correctly, to obtain reliable blood test results.

Fasting means nothing to eat or drink (except water) for 10–16 hours before your blood test. **The optimum time for fasting is 12hrs. (i.e. eat at 8pm for an 8am test)**

During your fasting period:

- You may drink plain water, but it must not contain additives - no tea, coffee or cordials.
- Do not eat chewing gum, lollies or jellies.
- Do not smoke during the fasting period.

Unless your doctor advises otherwise, you should continue any current medication.

IF YOU ARE DIABETIC DO NOT FAST WITHOUT MEDICAL ADVICE.

It is best to fast overnight and attend a collection centre in the morning. Many other fasting patients attend early, so you may experience some delays. Unfortunately it's not possible to make appointments.

IF YOU FAST LONGER THAN 16 HOURS - YOUR RESULTS MAY NOT BE ACCURATE, OR WE MAY NOT BE ABLE TO PERFORM SOME OF THE TESTS
